

HI THERE! I'M WILSON

PROFESSIONAL WEB GUY • ARTIST AND DESIGNER

OBJECTIVES

When it comes to the web, the part of my job that I love the most is making it easy to use. It doesn't matter whether the project is a blog or a full-fledged web app, I want the user to feel comfortable using whatever tool at which they aim their browser. It's my purpose and objective to eliminate confusion and leave the user feeling happy and satisfied.

EDUCATION

2010 - Thomas Edison State College
BSBA: General Management

SKILLS

- HTML & CSS
- Javascript
- Angular 2+
- Node.js
- PHP
- Craft CMS
- WordPress
- Magento
- UI/UX design
- Photoshop
- Illustrator

WORK HISTORY

2007-now **FREELANCE ARTIST, DESIGNER, AND DEVELOPER**

GRAPHIC/WEB DESIGN, ILLUSTRATION, WEB DEVELOPMENT

Over the years I've worked on projects ranging from web development for presidential candidates, to painting illustrations for magazines, to building out a UI for a collaborative comic book translation tool using vanilla JS, HTML & CSS. Whatever project I was on, I delivered value through my keen eye for quality, no matter the media or job type.

2015-2016 **AGENCY MULTIPLIED**

FRONT-END WEB DEVELOPER

During my time here, I had the privilege to work on a new startup Software as a Service (SaaS) web app, handling front-end development on the AngularJS framework and Bootstrap.

2010-2013 **CLASSY LLAMA STUDIOS**

FRONT-END WEB DEVELOPER

Working with an incredible team that focused solely on Magento e-commerce projects (with a little bit of WordPress thrown in here and there), I got to hone my skills as a front-end developer with a ton of PHP and Javascript heaped about for good measure. I also consulted and worked closely with the design and UX departments to make sure we delivered sites which looked great, were as usable and intuitive as possible, and had awesome code behind them!

2008-2010 **COLLEGEPLUS!**

INTERN (AND LATER AS A FREELANCE WEB DESIGNER AND DEVELOPER)

I had the enormous responsibility of designing and building the front-end of a complete EIS (*Enterprise Information System*) on the back of a custom-built CSS framework which I also developed (from scratch). The result of this EIS was a completely custom cloud-based all-in-one solution managing everything the company did, both company- and client-facing.
